**Write-up:** The day after the 2nd shot, patient developed blisters on his lips and mouth. The care facility said that he had a nut allergy -- but he had never been allergic to nuts. He stopped eating and drinking and his BP had dropped to 60/40. By Jan 16th they called to say he was dying and he passed away on 1/18/21. Patient had COVID19 from Oct 29th - early November. By Nov 21st he had lost 40 lbs. He was 6"3" and had gone from 189lbs to 149 lbs with COVID. By Nov 21st when we could visit, he had recovered from COVID, but was very thin and weak. He could not bathroom alone and kept falling. He didn't seem to have a bad reaction to the 1st COVID shot, But he immediately reacted to the 2nd shot and passed away within 6 days.

**Current Illness:** 1/6/2021-Resident noted with increased irritability and increased signs/symptoms of discomfort. Followed by Palliative APRN. Labs ordered and Tylenol increased for pain management. 1/7 labs BUN 28mg/dl/Creatinine 0.53mg/dl. CBC unremarkable. 1/7/2021-1st Pfizer Covid-19 Vaccine dose given. 1/15/2021 Palliative APRN came to visit reviewed labs Valproic Acid level WNL. Hepatic Panel with Albumin low at 2.6g/dl. Plan of care discussed with Guardian. N.O. DNR/DNH, may have draws labs and treat with ABX if needed. 1/24/2021 Patient vomited large amount of undigested food. 1/28/2021 2nd Pfizer Covid-19 Vaccine dose given.

**Preexisting Conditions:** Hx Covid + June 4, 2020; HYPERLIPIDEMIA, UNSPECIFIED (E78.5); UNSPECIFIED DEMENTIA WITHOUT BEHAVIORAL DISTURBANCE; TYPE 2 DIABETES MELLITUS WITH HYPERGLYCEMIA (E11.65); ESSENTIAL (PRIMARY) HYPERTENSION (I10); glaucoma; UNSPECIFIED MOOD [AFFECTIVE] DISORDER (F39); HYPOKALEMIA (E87.6); GASTROESOPHAGEAL REFLUX DISEASE WITHOUT ESOPHAGITIS (K21.9); HYPERLIPIDEMIA, UNSPECIFIED (E78.5);

**Allergies:** Nylons

**Diagnostic Lab Data:** Labs 2/10 BMP- Glucose 248mg/dl; BUN 31mg/dl; Creatinine 0.54mg/dl; Sodium 149mmol/L; CO2 36mmol/L; Albumin 3.0g/dl; Pre-Albumin 19.9mg/dl

**CDC Split Type:**

**Write-up:** 2/7/21 Increased difficulty chewing, swallowing, evaluated by SLP and dietician. Diet texture down-graded x 2 with poor appetite and recent 6lb weight loss. 2/8/21-APRN updated regarding poor appetite and difficulty chewing as well as downgraded texture of diet. Also informed of increased s/s of discomfort and increased use of PRN Oxycodone for pain. 2/9/21-elevated temp 100.7. 2/9/21 Covid pcr test negative. 2/9/21-N.O.?s APRN BMP, Albumin and Pre-albumin Level in am. 2/11/21-elevated temp 100.4. Covid rapid test negative. 2/12/21- CBG recorded at 517 at 5:20 am. Resident also has an elevated temp of 100.9. Tylenol administered per order. Vital signs include resp 24, radial pulse 134, O2 sat 83%. Supplemental oxygen

administered via nasal cannula. Head of bed elevated. DR. notified at time via telephone. Order given for sliding scale for CBG. Guardian updated regarding changes in residents condition, poor prognosis. Guardian requests Hospice eval and admit. Guardian requests comfort care no hospitalization, no IV's, no G-tubes, no labs etc, D/C of Palliative services. ARNP informed. 2/12/21 Acute Telehealth visit with APRN due to increased lethargy, elevated CBG's despite poor appetite and insulin administration. Resident unresponsive to verbal and noxious stimuli at time of visit. N.O. Morphine sulfate 20mg/ml, give 2.5mg PO/SL Q4hr PRN pain/shortness of breath. 2/12/2021-Admitted to Hospice, Lethargic, diaphoretic, T 98.1 P 130's R 18 O2 high 80's to low 90's via O2 mask at 3L. 2/12/2021- Resident legs and arms noted to feel cool this afternoon, O2 sat was 97% with O2 on @ 3L with mask Noted resident with sob and increased pulse. Prn morphine 0.25ml sl. given with good effect. Resident was less restless and quiet in her bed. Checked on resident several times this shift for needs. Resident noted to not move in her bed @ 8:15pm and noted she was not breathing. Supervisor called and pronounced resident deceased.
